

# Vestibular perceptual learning: Past studies and future projects

Fred Mast  
University of Bern  
[www.kog.psy.unibe.ch](http://www.kog.psy.unibe.ch)

ZüMüTü 2025

## **Collaborators:**

Matthias Ertl (now Prof. at University of Lucerne)

Daniel Fitze

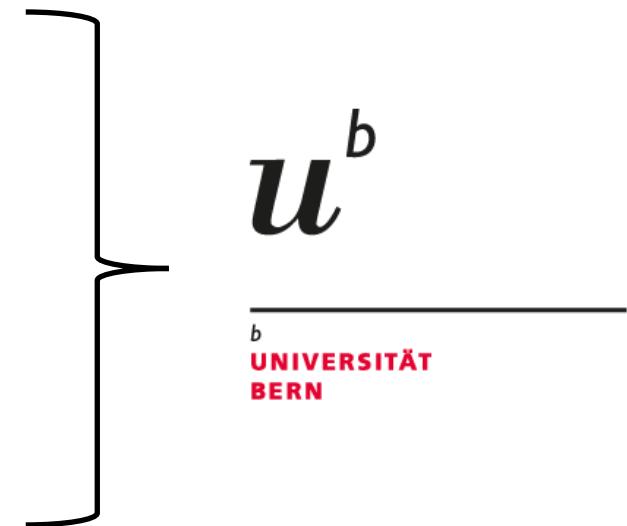

Andreas Szukics

Matthias Hartmann

Corina Schöne

Sarah Merks (Furrer) (now at Swiss Federal Nuclear Safety Inspectorate)

Manuel Klaus (now at Swiss National Science Foundation)

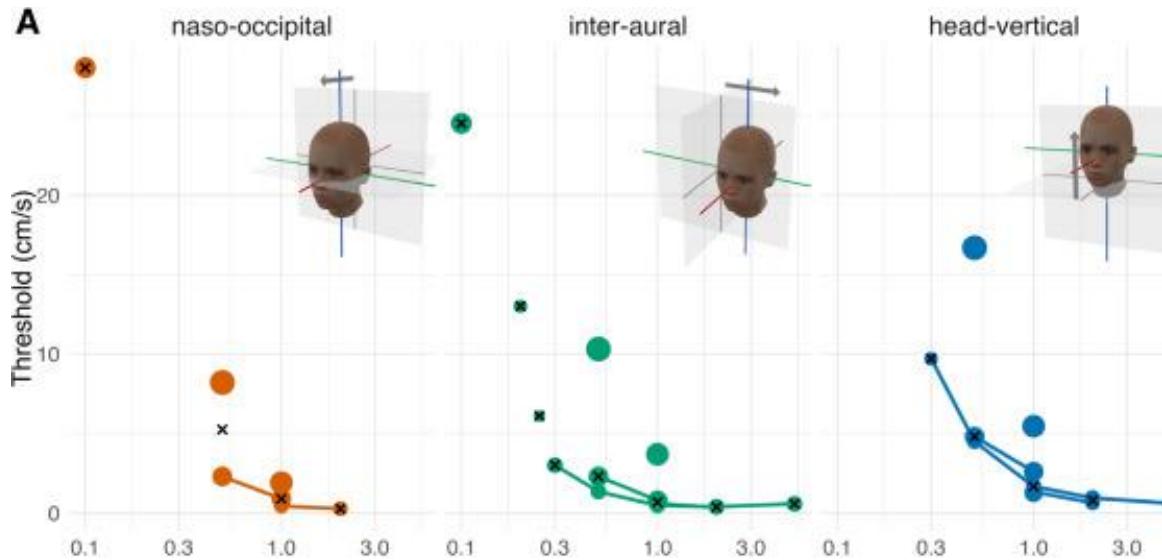

Daniel Merfeld, Ohio State University, College of Medicine

Michael Schubert, Johns Hopkins University

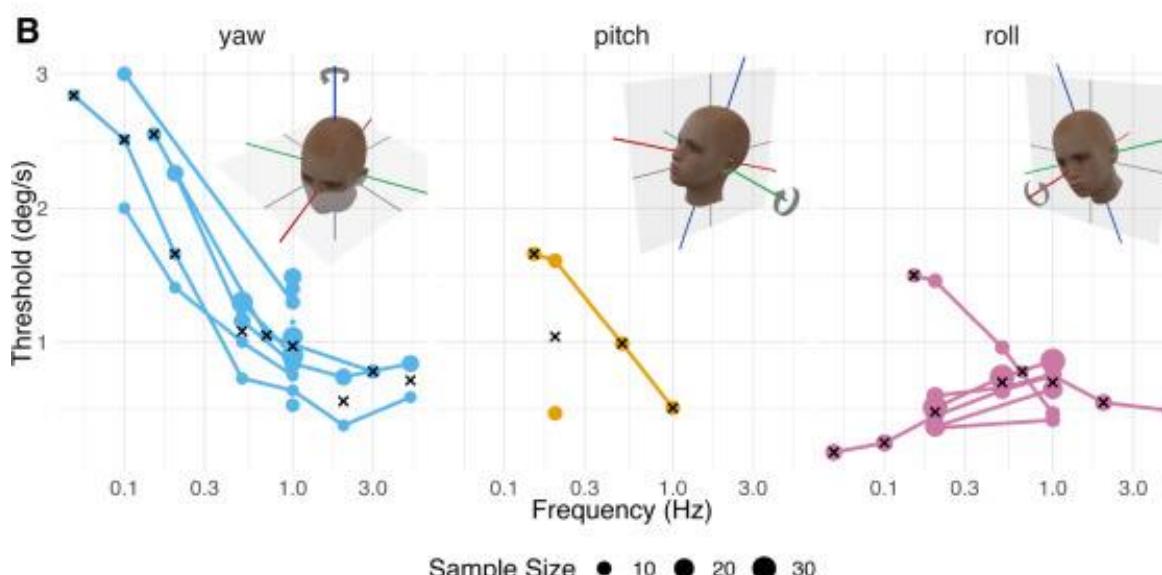

Michael Herzog, EPFL, Brain and Mind Institute

# Passive self-motion perception thresholds

## Translation

## Rotation

**Daniel C. Fitze, Fred W. Mast, Matthias Ertl, 2024: Human vestibular perceptual thresholds — A systematic review of passive motion perception.** Gait & Posture, 107, 83-95, <https://doi.org/10.1016/j.gaitpost.2023.09.011>.

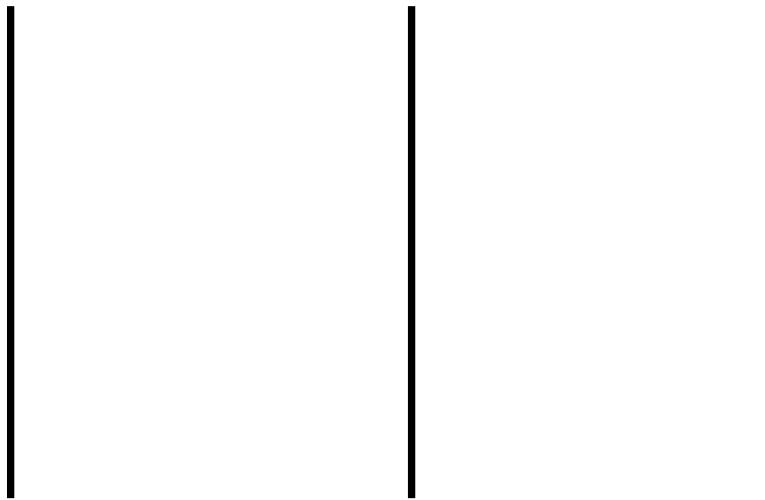

- «Vestibular» thresholds  
Valko, Lewis, Priesol, & Merfeld (2012)
- Potential for clinical applications

$$a(t) = A \sin(2\pi ft) = A \sin(2\pi t/T)$$

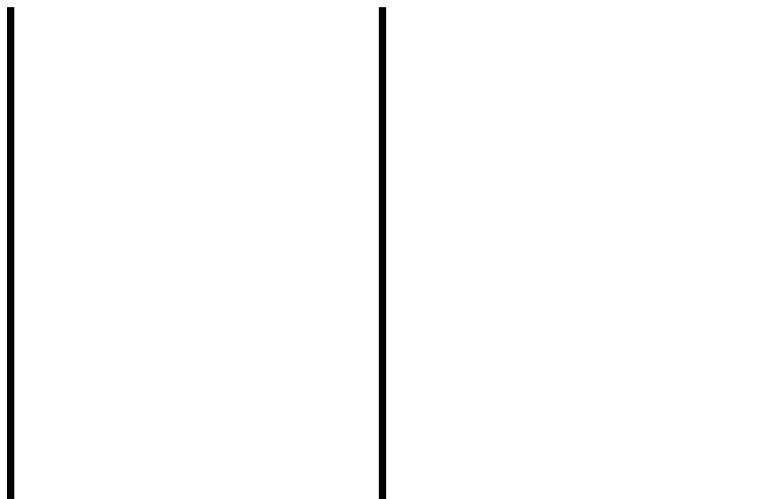

# Perceptual Learning

Improvement to detect sensory information as a result of practicing specific tasks (presumably by change of signal to noise ratio)

# Bisection Task

# Bisection Task

Training:  
4160 Trials

Second Baseline

Tartaglia, E., Bamert, L., Herzog, M. & Mast, F.W. (2012)

# Perceptual Learning

- Visual perception (e.g., attentional blink, visual motion detection etc.)
- Auditory perception (e.g., tone discrimination, speech recognition etc.)
- Tactile perception (e.g., Braille reading, vibrotactile sensitivity)
- Olfactory and gustatory perception (e.g., parfumer, sommelier)
- Multisensory perceptual learning (e.g. lip reading)
- Etc. etc.

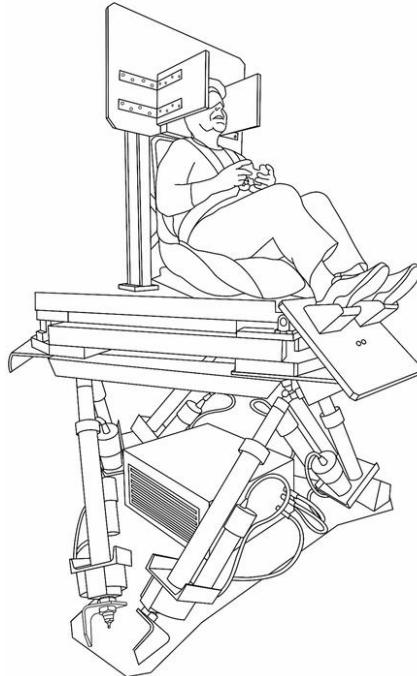

# Perceptual Learning

BERN**

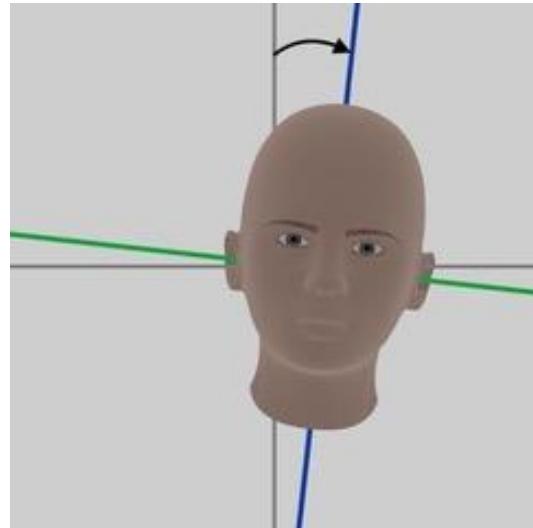

A

**All subjects**

B

**Subjects above the age 40**

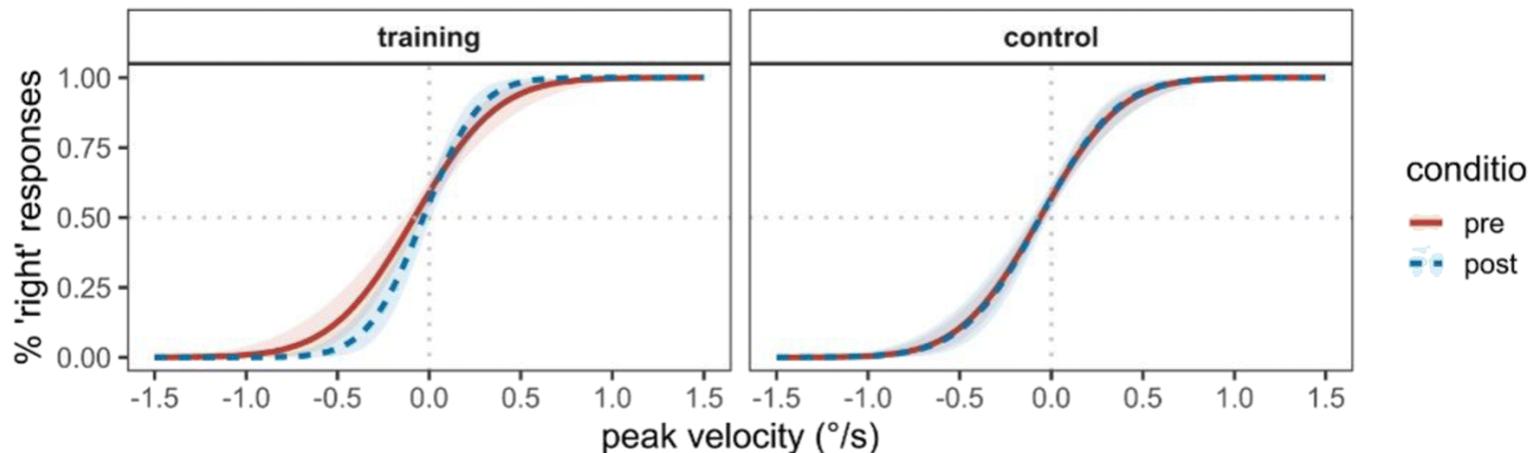

Klaus, M.P., Schöne, C.G., Hartmann, M. *et al.* **Roll tilt self-motion direction discrimination training:** First evidence for perceptual learning. *Atten Percept Psychophys* **82**, 1987–1999 (2020). <https://doi.org/10.3758/s13414-019-01967-2>

**Roll Rotation: Combined otolith and semicircular canal stimulus**

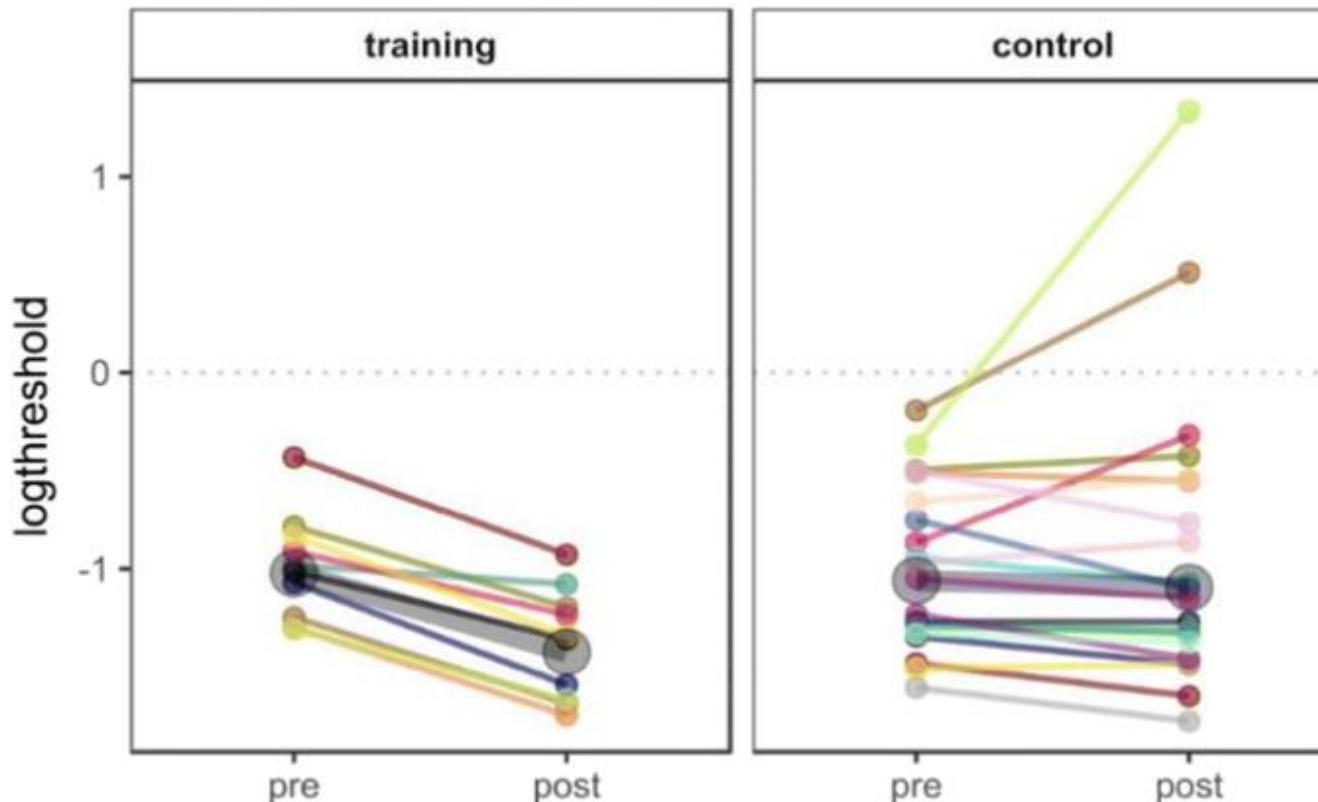

7 sessions of training, each 400 trials with feedback

**a** Pre/Post Comparison: Roll, 0.2 Hz

**Improved Sensitivity after 9 hour roll tilt perception training**

**a** Thresholds pre/post, Roll, 0.2 Hz

**0.2 Hz Roll rotation threshold**

**$0.36^{\circ}/sec \rightarrow 0.24^{\circ}/sec$**

Control condition:

$0.35^{\circ}/sec \rightarrow 0.33^{\circ}/sec$

No transfer to Pitch 0.2 Hz

No transfer to Pitch 1 Hz

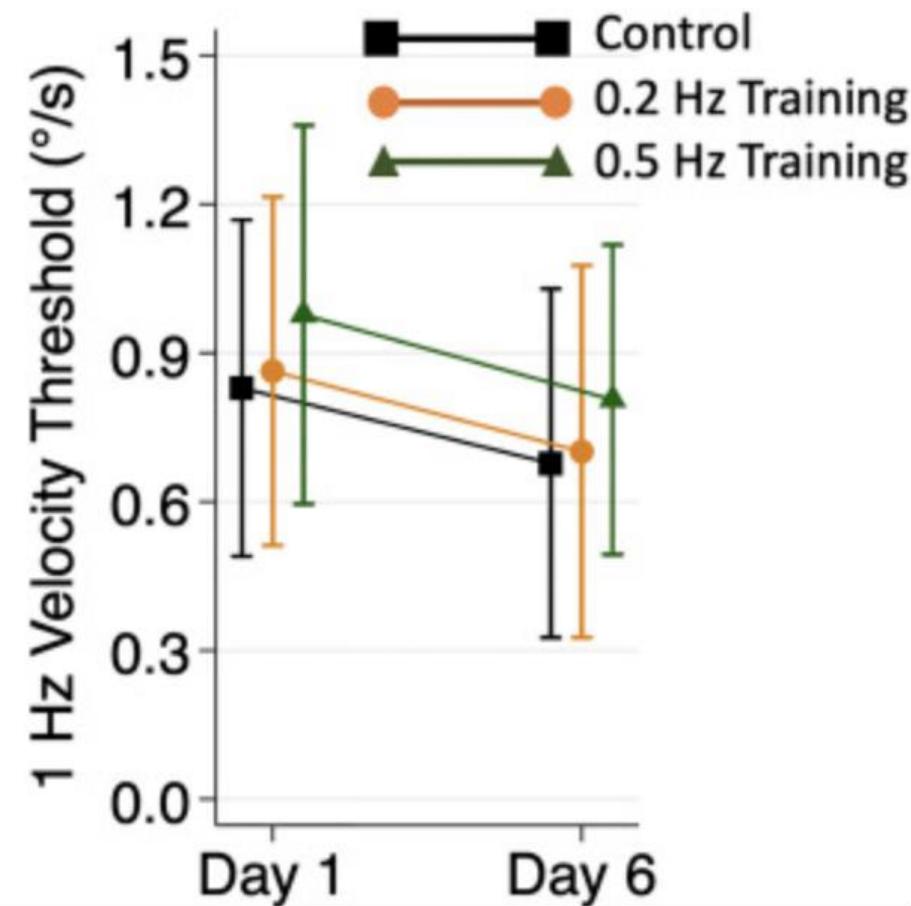

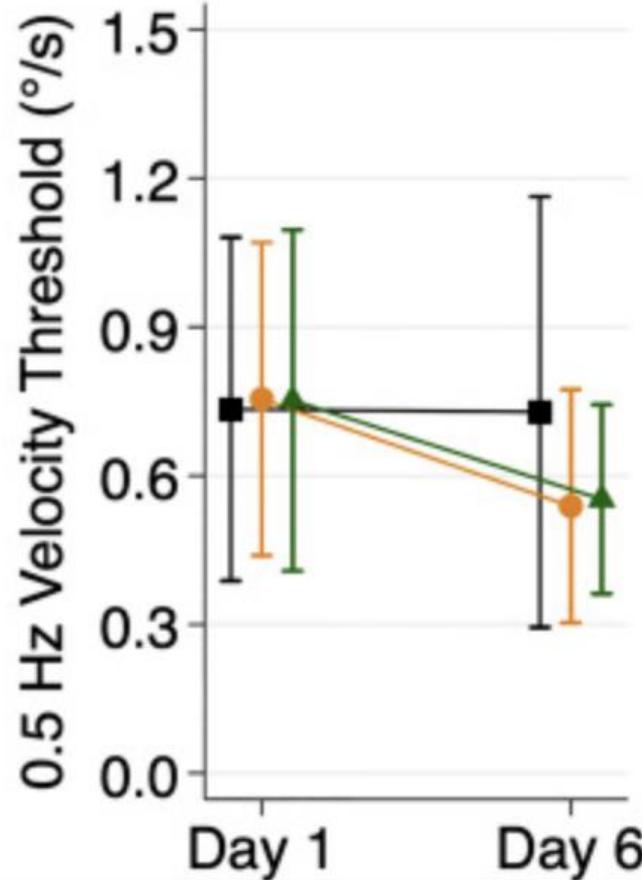

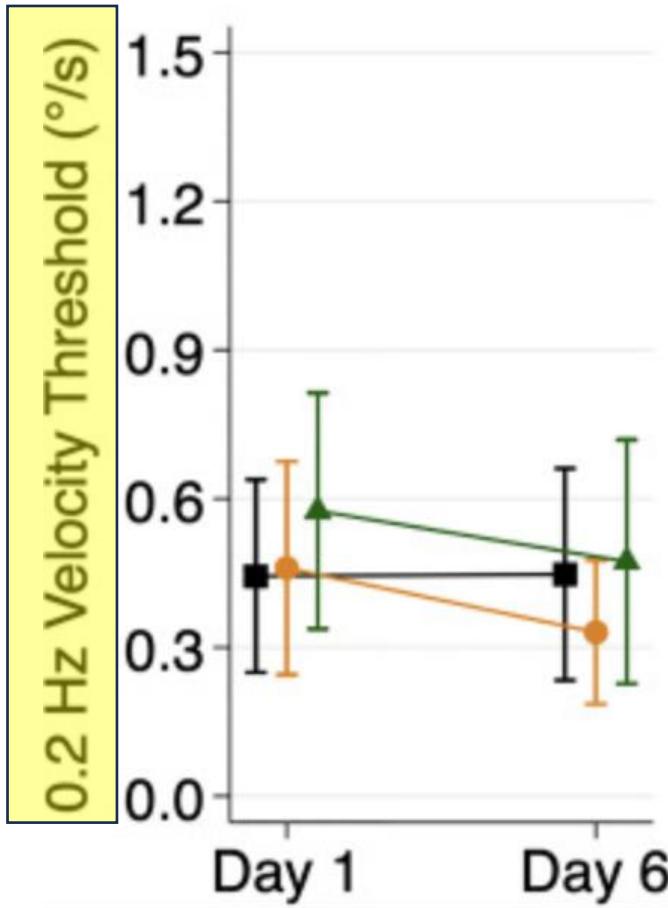

No transfer to 0.2 Hz y-translation

Transfer to 1 Hz Roll rotation threshold:  
 $0.42^{\circ}/sec \rightarrow 0.29^{\circ}/sec$

**But:**

improvement in the 1 Hz Roll rotation control condition

$0.26^{\circ}/sec \rightarrow 0.21^{\circ}/sec$

Wagner AR, Kobel MJ, Tajino J, Merfeld DM. Improving self-motion perception and balance through roll tilt perceptual training. *J Neurophysiol*. 2022 Sep 1;128(3):619-633.  
doi: 10.1152/jn.00092.2022. Epub 2022 Jul 27. PMID: 35894439; PMCID: PMC9448335.

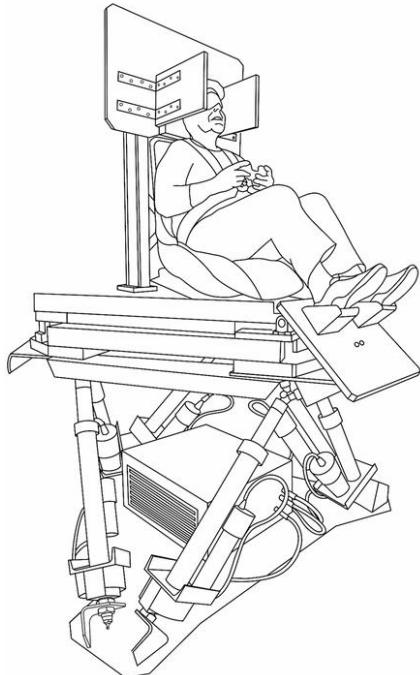

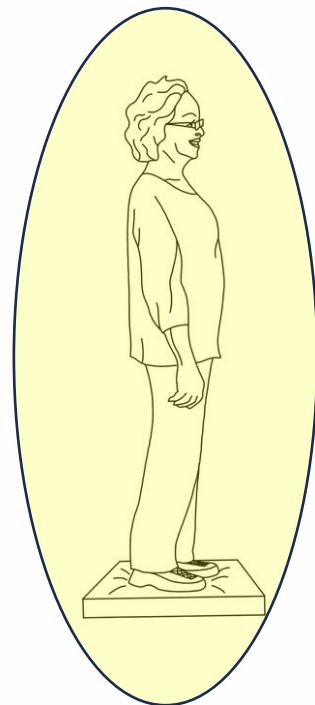

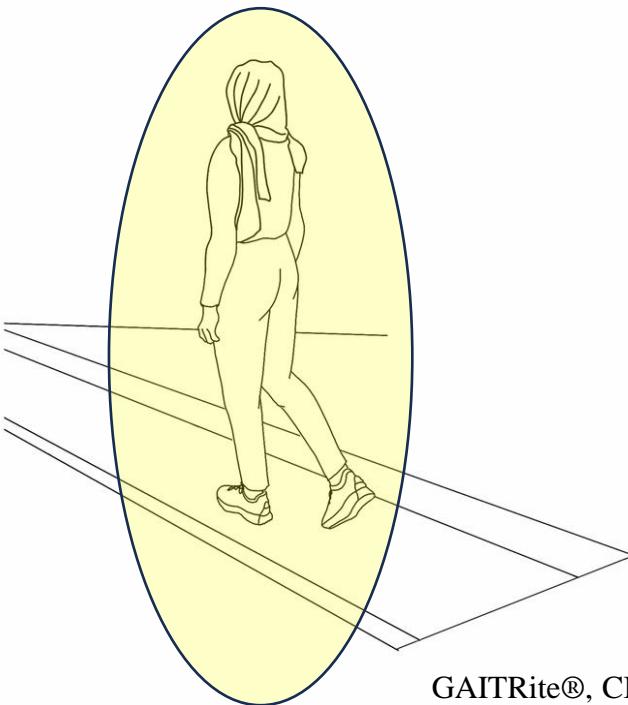

- Evidence for perceptual learning of roll rotation discrimination in **young and healthy participants**
- Improved sensitivity in trained stimuli and no transfer to untrained different stimuli (but some transfer across frequencies)
- Roll rotation thresholds mediates the influence of age on **balance** Beylergil, S.B., Karmali, F., Wang, W., Bermúdez Rey, M.C. & Merfeld, D.M. (2019).
- **Vestibular thresholds decline with age** Wagner A.R., Akinsola, O., Chaudhari, A.M.W., Bigelow, K.E., Merfeld, D.M. (2021)

Path Length

## Posturography

# Posturography

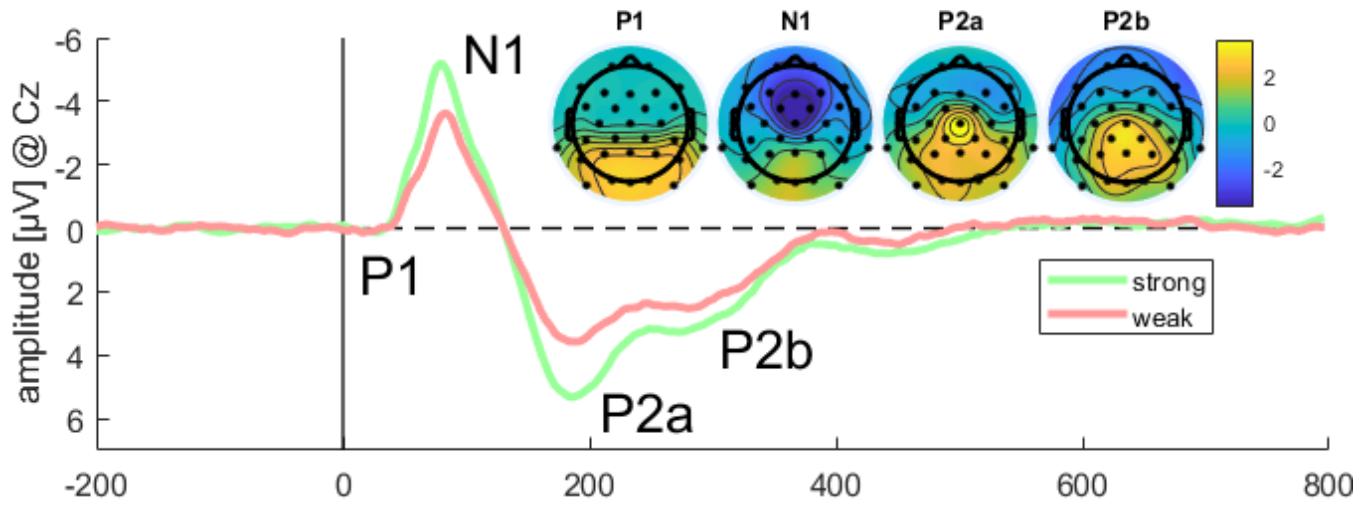

# Ongoing study

Participants (90, aged 65 and older)

- (1) Self-motion perception training (10 one-hour sessions of roll-rotation training)
- (2) Tai Chi training
- (3) Passive control condition

Pre- and post-training assessments:  
motion thresholds  
Follow-up measurements  
Posturography and gait measures  
vestibular-evoked potentials (VestEPs)  
rsMRI

# To sum up:

Perceptual learning in the vestibular domain – it exists

Perceptual learning in the vestibular domain – it improves balance and gait measures

Perceptual learning in the vestibular domain – it can be novel tool to prevent falls in older adults
